

80° Single Angle Tilt Indicator Label

Product Overview

Tilt Indicator label is a kind of single-use tip indicator used to monitor goods that must remain upright. It can show tilt, inversion and improper handling of goods in shipment and storage while monitor whether they are stored correctly.

If your goods have to be kept up-right during handling and shipping, you can try to stick tilt indicator label to warn handler to keep up your goods and make instructions or record when tilt happens. When package tilt from vertical direction over 80°, silver round will turn red, which becomes an indication and record about tilt.

The product accessories include a main product tilt indicator label, a big companion warning label, and a small warning label.

Use Tips

Step1: Tear off the backing adhesive, the tilt indicator activated

Step2: Stick with companion label, better stick 2 labels on adjacent sides of package to make a comprehensive monitoring

Step3: If the package tilt from vertical direction over 80°, silver round will turn red, which becomes an indication and record.
